

Anthony Lee

✉ anthonylee0700@gmail.com 📍 Denpasar, Bali

Summary

Full Stack Developer with more than 6 years of Website & Artificial Intelligence development. In 2022, I graduated in Information Technology from STIKI Indonesia university. I've been working at several places since the beginning university life such as Web Programmer, WordPress Developer & Artificial Intelligence Development.

Experience

- | | |
|----------------------|-------------------|
| Spicerack | Florida - Remote |
| Full Stack Developer | August 2023 - Now |
- Build and maintain a TypeScript-based, componentized admin/user dashboard with reusable UI patterns and strong typing.
 - Develop CRUD interfaces, interactive forms, client-side validation, and role-based access/authentication for admin and user workflows.
 - Integrate dashboard with backend APIs (REST and WebSocket) to surface live data, status updates, and real-time UI behavior.
 - Improve developer experience with type-safe utilities, linting, build configuration, and documentation/onboarding notes.
 - Implement responsive styles and basic CSS to keep the UI consistent across devices.
 - Maintain and extend a PHP/Smarty marketplace backend for product management, vendor onboarding, orders, and store configuration.
 - Create and customize Smarty templates, Less/CSS themes, and JavaScript enhancements for interactive product pages, cart flows, and improved UX.
 - Integrate and ensure correctness of payment and shipping workflows, and resolve cross-browser styling and template performance issues (caching, rendering).
 - Write deployment, theme-convention, and developer setup documentation for the marketplace.
 - Build a Fastify-based API wrapper to expose and normalize CS-Cart models (products, orders, users) as structured endpoints for integrations.
 - Implement authentication, request validation, error handling, and data transformation logic to standardize CS-Cart payloads for external services (sync jobs, webhooks, microservices).
 - Add basic tests, usage examples, and README documentation to enable other teams to consume and integrate with the service.
